

REGENERATIVE MEDICINE

may be the solution to your joint pain! PRP/Stem Cell therapy has revolutionized treatment of chronic pain & inflammation in the knees, shoulders AND hips.

Platelet Rich Plasma (PRP) and Stem Cell Therapy have revolutionized the treatment of chronic pain and inflammation. We at the Regenerative Healing Arts Center specialize in such a natural approach for treating knees, shoulders and hips in our clinic. Gait analysis, functional bracing, introduction of mesenchymal stem cells (NOT collected from embryos)...when used together, form the foundation that allows for enhancing the body's natural ability to heal while postponing or eliminating the need for a surgical procedure.

Healing Arts Center**

When people think of regenerative medicine it is often associated with just stem cells. Regenerative medicine is much more than just stem cells, it includes exosomes, growth factors, cytokines and other regenerative tissues, offered in an injectable cocktail that includes PRP, platelet rich plasma. (PRP is collected from the patient's body with a simple blood draw.) Together this has been shown to help with decreasing or eliminating pain, reduction of inflammation, minimizing of scar tissue and promotion of soft tissue growth by harnessing the body's own natural properties to limit recovery time and speed the healing process.

It's possible to treat your chronically injured and/or arthritic joint problems without being subjected to surgery with associated pain, and disability. Regenerative techniques do not require prolonged down time or a painful process of reclaiming the loss of range of motion that results from surgery. Resumption of normal daily activities can begin immediately after treatment.
